Our Product Management team is testing our own genetics and breeding from partners to extend their technical knowledge for you. Improved product quality from unrooted to finished product, tolerances to pests and diseases, reducing the usage of PGR's and extending the shelf and garden life are the four main research targets. The application of modern breeding techniques is the key to success at Beekenkamp Plants today. Investments are based on a clear vision of the future needs of all the links within both contemporary ornamental horticulture production as well as in the supply chain.

Test locations in different parts of the world are very important to us, as it is Beekenkamp's goal to provide the consumer with the best product available in their climate zone. Ons Product Management team test onze eigen genetica en teelt van partners om hun technische kennis voor u uit te breiden. Verbeterde productkwaliteit van onbeworteld tot afgewerkt product, tolerantie voor plagen en ziekten, vermindering van het gebruik van PGR's en verlenging van de houdbaarheid en de levensduur in de tuin zijn de vier belangrijkste onderzoeksdoelstellingen. De toepassing van moderne veredelings technieken is vandaag de dag de sleutel tot succes bij Beekenkamp Plants. Investerings zijn gebaseerd op een duidelijke visie op de toekomstige behoeften van alle schakels binnen zowel de hedendaagse sierteeltproductie als in de toeleveringsketen.
